

iScanPhotoApp

The family photo organizer for Windows

Every face. Every story. *Finally found.*

Shoeboxes, phones, old hard drives: iScanPhotoApp brings them all together, finds every face, asks who they are, and remembers. For your family, and for the generations after.

Pay once, keep it

No subscription. No monthly fees.

Private by design

Your photos never leave your PC.

Try it free

30 days, every feature, no card.

HOW IT WORKS

From shoebox to *search box*.

Most families have thousands of photos and nobody left who knows every face.

iScanPhotoApp does the sorting for you, so the people who remember can spend their time remembering.

1

Scanner

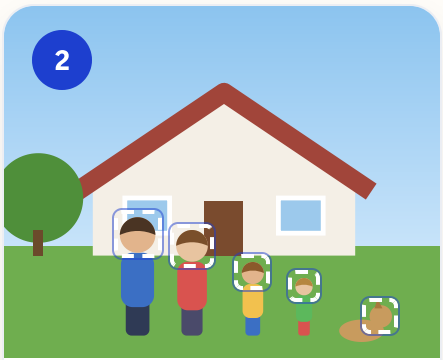

Phone

Camera card

PC folders

Bring everything in
Scan prints right in the app, send photos from your phone over Wi-Fi, or add a camera card or the folders already on your PC. iPhone photos, camera RAW and videos too.

2

It finds the faces
iScanPhotoApp looks through every photo and groups the faces that belong together, pets included. It all happens on your own computer.

3

 **Aunt Linda**

...and suggested in 386 more photos

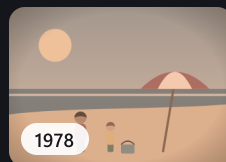

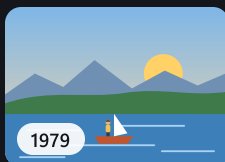

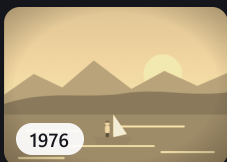

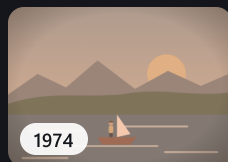

Name them once
Type a name once and the whole group is done. iScanPhotoApp suggests that person across the rest of your library, and you always have the final say.

Then just *ask*.

Search the way you talk: by who, where, when, or what's in the picture.

 Grandpa Walt at the lake, 1970s|

23 photos

50,000+

photos in one library: room for a lifetime of family pictures.

On your PC

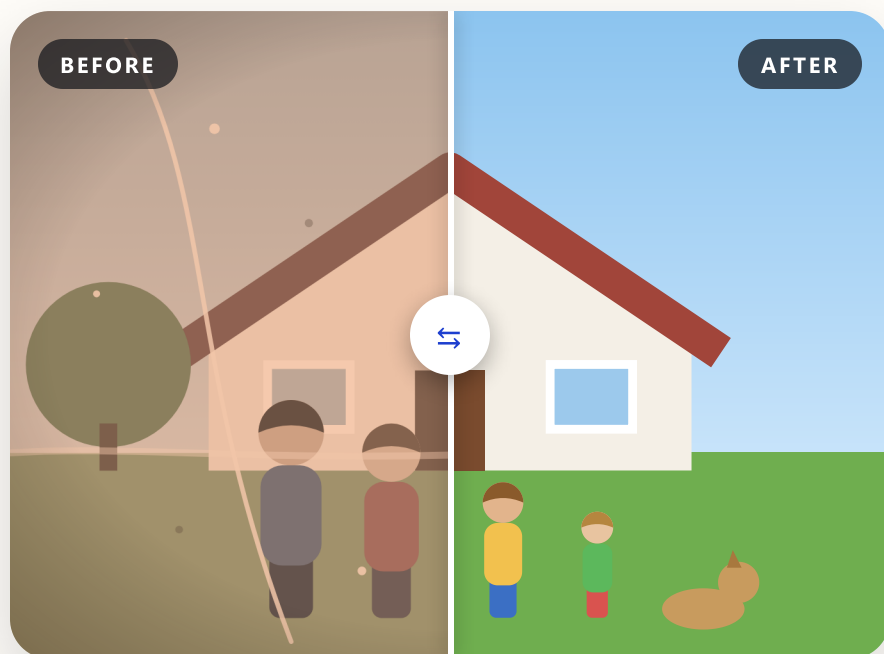

Faces are found and matched on your own computer, never uploaded.

"About 1975"

is a perfectly good date. Undated prints are welcome here.

Bring old prints *back to life*.

Dust, scratches and faded color, fixed in a click, with a live before-and-after so you can see every change. Your original is never touched: every fix is saved as a new copy, right next to it.

Fixes in a click:

✱ Remove dust & scratches

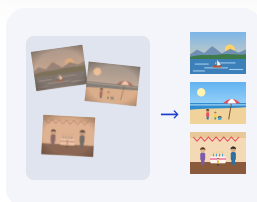

✱ Fix faded color

✱ Color for black-and-white

✱ Sharpen & enlarge

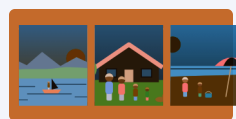

📐 Crop, straighten, brighten

Slide the line to compare before you save. Auto fix brightens dark, washed-out and faded photos in one go.

Scan right in the app

Lay several prints on the glass: each becomes its own photo, cropped and straightened, ready to name. Flip them over to keep the handwriting on the back.

negatives → positives

Slides and negatives

Scan film with your scanner's film adapter: every frame becomes its own photo, and negatives turn into true-color positives.

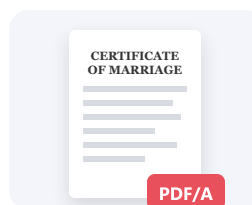

📅 About 1975

The 1960s

Summer 1982

Dates for undated prints

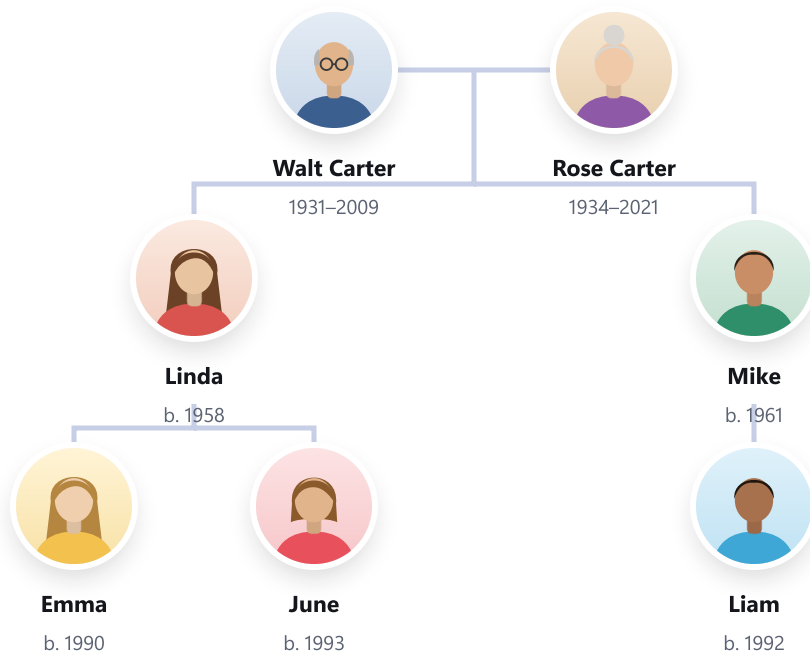

"About 1975" or "the 1960s" works fine. Date a whole batch at once, and your timeline still falls into place.

Letters, recipes and records

Certificates, letters and recipe cards become clean, searchable PDFs, in the archival PDF/A format.

Who they were. *How they're related.* What they had to say.

See it in photos

"Photos of Grandma's side" or "three generations together", in one click.

Already on Ancestry?

Bring your tree in, or take it out, as a standard GEDCOM file.

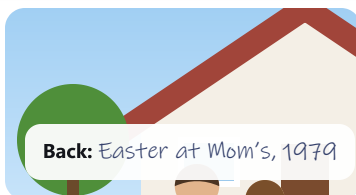

Rose tells the story

Lake Cumberland, 1975 · 2:14

Stories, in their own voice

Type the story behind a photo, or record Grandma telling it. The voice stays with the photo forever.

The back of the print, too

Scan both sides: the handwriting on the back stays with the photo, along with where the original is kept.

Our family photos

Open me.html

A keepsake for everyone

Put your whole archive on a USB drive for each family member. It opens in any web browser, with nothing to install.

Share between family PCs

Names, dates and albums stay in step on up to three computers at home.

Phone photos over Wi-Fi

Scan a code with your phone and send its photos to your PC. Nothing to install.

Your life on a map

Every photo with a location, on a map that works without internet.

A timeline of your family

Scroll through the decades and watch the kids grow up.

Your memories stay *yours*.

Family photos are meant to outlive any app, any company and any computer. iScanPhotoApp was built around that from the very first line.

- 
Your originals are never changed
 Edits, fixes and restorations are saved as new copies. The photo you started with stays exactly as it was.
- 
Private, on your PC
 No account to create and nothing uploaded. Faces are recognized on your computer, and it works without internet.
- 
Backups that check themselves
 One click copies everything to an external drive. It quietly re-checks your files for damage and can put back a good copy.
- 
Readable without our app
 Names, dates and stories are also saved as spreadsheets, a standard family-tree file, and details other photo programs read.
- 
Archival formats
 Documents are saved as PDF/A, made to be read for decades. Backups add long-lasting TIFF copies of iPhone and RAW photos.
- 
Some photos stay private
 Mark a photo private and it stays out of keepsake copies and family sharing. Record who took it and its rights, too.

Five years of a photo subscription, or *one price, once*.

Some photo services charge every year, as long as you want to see your own photos. iScanPhotoApp is yours to keep. No subscription, no ads, no account.

A \$120-a-year subscription, for 5 years

\$600

A \$250-a-year subscription, for 5 years

\$1,250
