

iScanPhotoApp

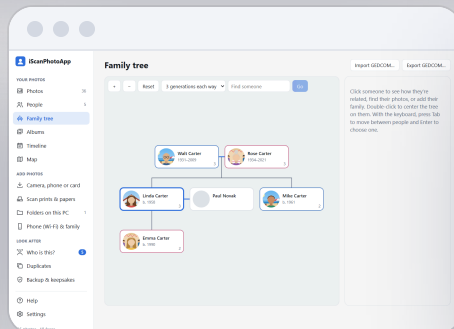

The family photo organizer for Windows

Every photo. Every face. *Found, named and kept safe.*

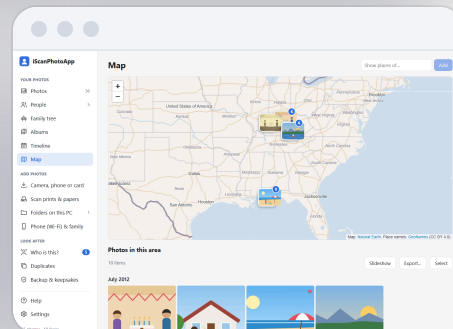

Shoeboxes, phones and old hard drives in one place.
iScanPhotoApp finds every face, asks who they are, and keeps
your family's story for the generations after. All on your own PC.

"Who is this?": name a group once

Your family tree, with faces

Every photo on a map, offline

Everything iScanPhotoApp *does for your family*

Find anyone, any time

Knows who's who

Finds every face, groups the ones that look alike and asks who they are. Name someone once and it suggests them across your whole library. Pets too. You always have the final say.

Search in your own words

"Grandma at the lake in the 70s": by who, where, when, or what's in the picture.

Timeline and map

Your library by year and month, and every photo with a location on a map that works offline.

Dates for undated prints

"About 1975" or "the 1960s" work fine; it can even estimate a date from the look of a photo.

Bring every photo in

Folders on your PC

Point it at your picture folders. It keeps up with new photos by itself and never moves a file.

Scan right in the app

Several prints on the glass become separate, straightened photos; backs stay with their fronts.

Photo feeders, slides and negatives

Stacks of prints through a photo feeder, film through a film adapter: each frame its own photo.

Phones, cameras and cards

Copy from a camera or card, a phone by cable, or a phone over Wi-Fi with nothing to install.

Restore and preserve

Bring old prints back

Remove dust and scratches, fix faded color, add color to black-and-white, sharpen and enlarge.

Simple edits

Crop, straighten, rotate, brightness and color, and turn scanned negatives into positives.

Originals never change

Every edit and restoration is saved as a new copy next to the original.

Documents as PDFs

Letters, certificates and recipes become clean, searchable, archival PDF/A files.

For the whole family

Family tree

Everyone with their faces, how they're related, and photos of one side of the family in a click.

Stories in their own voice

Type the story behind a photo, or record it. Note where the original print is kept.

Keepsake copies

A copy of your archive that opens in any web browser, on any computer, for every relative.

Share between family PCs

Names, dates and albums stay in step on up to three computers at home.

Built to last

Backups that check themselves

One-click backups to an external drive, and regular checks for damaged files.

Readable without the app

The catalog as spreadsheets, the family tree as GEDCOM, details next to your photos.

Private by design

No account, no cloud, nothing uploaded. Faces are recognized on your own computer.

Collections and privacy marks

Albums inside albums, photographer and rights, and photos kept private.

One price. *Yours to keep.*

Personal \$79 · Family \$129 (3 PCs) · one-time, no subscription · free 30-day trial · for Windows 10 and 11
